Informatics Engineering graduate from Kwik Kian Gie School of Business with a strong interest in ERP systems, business process analysis, and enterprise software implementation. Experienced in gathering and analyzing business requirements, designing system solutions, coordinating cross-functional teams, and supporting software development throughout the SDLC. Passionate about translating business needs into effective technology solutions while collaborating with both technical and non-technical stakeholders.

## EDUCATION

|                                                                                                                                                                                                                                                                                                                                    |                                                        |

| As part of the independent study program at Bangkit Academy, led by Google, Tokopedia, Gojek, and Traveloka, significant development has been achieved in both soft skills and hard skills, particularly in cloud computing technologies, with a focus on hands-on experience and operations on Google Cloud Platform. Below are some key achievements during this program:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                         |

| FishGo                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Dec 2025 - Feb 2026 |
| <p>Led the development of FishGo, a collaborative software project that required project planning, task coordination, and feature implementation within a cross-functional development team. Responsible for ensuring timely project delivery while maintaining collaboration across development activities.</p> <ul style="list-style-type: none"><li>Led a cross-functional development team by coordinating project activities, assigning responsibilities, and monitoring progress to ensure timely project completion.</li><li>Planned project deliverables and collaborated with team members throughout the software development lifecycle.</li><li>Developed core business logic supporting inventory management, virtual transactions, and resource management features.</li><li>Coordinated software development activities, assigned development tasks, monitored progress, and ensured project milestones were completed on schedule.</li><li>Collaborated with team members to enhance application quality through continuous feature improvements and testing.</li></ul>                             |                     |
| Allergify                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Oct 2024 - Dec 2024 |
| <p>A capstone project utilizing AI-based OCR technology to scan and analyze packaged food labels, helping users detect allergens and make informed decisions. As the team leader, I coordinated efforts across machine learning model development and deployment, UI/UX design, and testing, ensuring the successful delivery of the project. Designed to enhance food safety and provide a seamless experience for individuals with specific allergies.</p> <ul style="list-style-type: none"><li>Led a cross-functional capstone team by coordinating project planning, assigning responsibilities, and monitoring project progress.</li><li>Conducted user analysis, defined project scope, prepared project briefs, and estimated project costs to support effective project planning.</li><li>Collaborated with team members throughout application development, ensuring alignment between project objectives and implementation activities.</li></ul>                                                                                                                                                       |                     |

- Conducted functional and regression testing, documented issues, and verified improvements prior to deployment.
- Coordinated cloud deployment activities to support application accessibility and system reliability.

planT 

Dec 2023 - Jan 2024

A Hackfest project with rank #54 of 693 Teams also Google Solution Challenge project, planT aims to address the challenge of optimizing plant growth and crop yield through a user-friendly mobile application.

- Created a User Pesona for application.
- Created UI / UX using Figma for planT.

SKILLS

---

**Programming Language:** HTML, CSS, JavaScript, PHP, Java, Python, Dart, C#, Go.

**Containerization and Orchestration:** Docker, Kubernetes.

**Soft Skills:** Leadership, Business Communication, Presentation, Problem Solving, Critical Thinking, Adaptability, Time Management, Team Collaboration, Stakeholder Management.

**Tools and Technologies:** Microsoft Words, Microsoft Excel, Power Points, Microsoft Access, Visual Studio Code, Android Studio, GitHub, GitHub Actions, Google Cloud Platform, Postman, Firebase, Node.js, PostgreSQL, MySQL, Netbeans IDE, Figma, Enterprise Architect, Draw.io, Lucidchart, XAMPP, WebStorm, Notion, Trello, Jira, Jenkins.

**AI & Intelligent System:** Generative AI, Google Gemini API, Prompt Engineering, Document Intelligence

**Business & Functional Skills:** Business Process Analysis, Requirement Gathering, Functional Requirement Analysis, Functional Documentation, Project Coordination, User Acceptance Testing, Stakeholder Management, Business Process Improvement, System Testing.

**Frameworks & Libraries:** Flutter, React JS, Express JS, Flask, Angular, Codelgniter, FastAPI.

LANGUAGES

---

**Bahasa Indonesia** (Native proficiency) • **English** (Professional working proficiency)
